# Bootstrap

## Lab n°3

1.  Starter code: **https://codepen.io/elhajji/pen/PoPOErO**

2.  instructions on how to create a repository and set it up such that you can host and view your finished web pages on GitHub Pages, i.e., GitHub.io domain name. You will need to provide that URL for your peer review.

3.  Create a folder in your repository that will serve as a container folder for your solution to this assignment. You can call it whatever you want. For example, `Lab3-solution`. Create an `index.html` file inside the solution container folder, e.g., `Lab3-solution/index.html`.

4.  The implementation of the page you will be creating should follow the mockup illustrations shown below. You are provided 3 mockups: large and tablet (same), mobile, and mobile with mobile menu dropdown shown. Your implementation has to be JUST 1 page. In other words, you will be creating a single, responsive page.

5.  Your page must include a CSS file. No inline styles allowed. Your CSS file should be placed into a `css` folder under the solution container folder, e.g., `Lab2-solution/css`

6.  Note that this page must be responsive and that the display must only vary if the browser size is changed, without touching the code.

**MOCKUP ILLUSTRATIONS ARE BELOW:**

# Planète

## Les Etats-Unis créent le plus grand sanctuaire marin au monde

Les activités d'extraction de ressources minières et de pêche commerciale sont interdites dans un sanctuaire qui s'étend sur près de 1,3 million de km2 dans l'océan Pacifique.

Dix marques de thon en boîte passées au gril

Selon Ban Ki-moon, « le monde peut et doit stopper Ebola »

La forêt publique sous la menace de nouvelles coupes budgétaires

La contamination des rivières par les pesticides s'est durablement généralisée

L'état de catastrophe naturelle déclaré pour 73 communes
